CBPATSISP Fact Sheet | Updated September 2023

## What Works in Indigenous Suicide Prevention

This fact sheet describes the key factors in Indigenous suicide prevention identified in the Solutions That Work<sup>1</sup> report

The Report<sup>1</sup>

The work of the Centre of Best Practice in Aboriginal and Torres Strait Islander Suicide Prevention (CBPATSISP) builds on the Aboriginal and Torres Strait Islander Suicide Prevention Evaluation Project (ATSISPEP). The ATSISPEP 2016 legacy report—Solutions That Work<sup>2</sup>—identified success factors in Indigenous suicide prevention. These factors were identified through a meta-evaluation of Indigenous suicide prevention activities, which was also supported by a combination of:

- 12 Indigenous community, risk group, and subject-matter-specific Roundtables Consultations on suicide prevention,
- 2) a literature review on community-led Indigenous suicide prevention,
- 3) a thematic analysis of 69 previous Indigenous suicide prevention focused consultations, which involved 1,823 participants,
- 4) an **analysis** of other sources such as state and territory general population suicide prevention strategies, and
- 5) key recommendations from the inaugural National Aboriginal and Torres Strait Islander Suicide Prevention Conference held in Alice Springs in May 2016.

Each suicide death is different, and at the population level, the causes of suicide are multi-layered, which requires a comprehensive response to Indigenous suicide.

Layers of Responses

ATSISPEP identified three broad layers of responses:

For individuals challenged by suicide ideation, or for those who have recently attempted suicide, preventative interventions are required

Clinical mental health services delivered in culturally safe service environments with access to Indigenous and/or culturally competent non-Indigenous staff, available 24/7, in a timely manner are critical.

For groups with higher rates of suicide (i.e., Indigenous young people), tailored preventative responses are required:

Peer-to-peer support, diverting young people from alcohol or drug misuse, or other challenging behaviours, and contact with Elders and culture, can enhance social and emotional wellbeing, and prevent suicides in young people.

For individuals, families, and communities, community-based responses are required to:

- raise community awareness and capacity in relation to suicide through education programs that support help-seeking behaviours for mental health and suicide ideation;
- 2) promote culturally secure services;

With the first station of the Ref Printheeven in the Ref Station of the La

- 3) address upstream issues associated with suicide such as unemployment and alcohol and drug misuse; and
- 4) promote healing and resilience in individuals, families and communities by strengthening social and emotional wellbeing and culture.

to a state of the design of the state of the

Community-level suicide prevention activities are most likely to succeed if they are 1) co-designed and implemented under Indigenous community leadership and/or, 2) in genuine power sharing partnerships between service providers and Indigenous communities.

Communities are in the best position to design cultural and lived experience elements into service responses; it is also the right of Indigenous people to be involved in service and program co-design and delivery both as Indigenous people and as mental health consumers. In addition, community empowerment is a beneficial outcome per se, with the potential for flow-on benefits including lower rates of Indigenous suicide.

## Success Factors Identified by ATSISPEP

The success factors for Indigenous suicide prevention were provided in the Report<sup>1</sup>. Those identified in the meta-evaluation of evaluated community-led Indigenous suicide prevention programs are in bold.

| Universal/<br>Indigenous<br>community<br>-wide | Primordial<br>prevention | Addressing community challenges, poverty, social determinants of health                  |
|--|--------------------------|--|
|  |                          | Cultural elements - building identity, social and<br>emotional wellbeing, healing        |
|  |                          | Alcohol/drug use reduction   |
|  | Primary<br>prevention    | Gatekeeper training - Indigenous-specific  |
|  |                          | Awareness-raising programs about suicide risk/use of DVDs with no assumption of literacy |
|  |                          | Reducing access to lethal means of suicide   |
|  |                          | Training of frontline staff/GPs in detecting depression and suicide risk                 |
|  |                          | E-health services/internet/crisis call lines and chat services                           |
|  |                          | Responsible suicide reporting by the media   |
| Selective -<br>at-risk<br>groups               | School age               | School-based peer support and mental health literacy programs                            |
|  |                          | Culture being taught in schools  |
|  | Young<br>people          | Peer-to-peer mentoring, and education and leadership<br>on suicide prevention            |
|  |                          | Programs to engage/divert, including sport   |
|  |                          | Connecting to culture/Country/Elders   |
|  |                          | Providing hope for the future, education - preparing for<br>employment                   |
| Indicated -<br>at-risk<br>individuals          | Clinical<br>elements     | Access to counsellors/mental health support  |
|  |                          | 24/7 availability  |
|  |                          | Awareness of critical risk periods and responsiveness at those times                     |
